Battery Jump

The emergency battery jump start can be used if your battery is dead to unlock your door. Do not remove the battery until you have opened your door.

WARNING: The lock will remain unlocked until you change the battery or manually relock the door from the inside!

1. Connect a new high-quality alkaline 9 volt battery to the contacts below the touchscreen keypad.

» Keep the battery connected to the jump start contacts as you unlock your door.

2. Enter a User Code into the keypad.

3. Rotate the lever to open the door.

4. Replace the dead battery with the new 9 volt battery.
